

THOMAS J HANRATTY:
JUST A FEW MORE MEMORIES

Mark J McCready

RECOGNITIONS AND AWARDS

“Junior” (Allan P. Colburn Award), American Institute of Chemical Engineers, 1957

National Science Foundation Senior Postdoctoral Fellowship, 1962

Curtis W. McGraw Award, American Society for Engineering Education, 1963

William H. Walker Award, American Institute of Chemical Engineers, 1964

Professional Progress Award, American Institute of Chemical Engineers, 1967

Member, National Academy of Engineering, 1974

Honorary Doctorate Degree, Villanova University, 1979

Senior Research Award, American Society of Engineering Education, 1979

Shell Distinguished Professorship, 1981-1986

Distinguished Engineering Alumnus Award, Ohio State University, 1984

Ernest Thiele Award, Chicago Section AIChE, 1986

University of Illinois Senior Scholar, 1987

American Academy of Arts and Sciences, 1997

Lamme Medal, Ohio State University, 1997

First winner of The Multiphase Flow International Prize, 1998

Member, National Academy of Sciences, 1999

Doteur Honoris Causa, de Institut National Polytechnique de Toulouse, 1999

Recognition as one of the influential chemical engineers of the modern era

(post WW2/at the AIChE Centennial Celebration, Philadelphia, 2008)

Winner of the J. Stanley Morehouse Award Villanova College of Engr., October 2, 2009

Villanova University College of Engineering J. Stanley Morehouse Memorial Award-2009

ACADEMIC ADMINISTRATION!

- Tom was the acting director of the School of Chemical Sciences for a period of a few months in 1999.
- In the end Chemistry and Chemical Engineering remained together in the School of Chemical Sciences and the “divorce” proceedings with Biochemistry was handled as graciously as it could have been!

CULTURE...

- I walked into Tom's office one day and he asked if I had been to the concert the night before
- I had missed what might have been William Warfield's last recital.
 - I'll bet it was really good!

<https://www.youtube.com/watch?v=4XIEzY4tMyg>

INFLUENCE ON STUDENTS

- In addition to all of us, and undergraduates who did research in his lab, there were many other Illinois students who he influenced
 - ~a few thousand undergraduate chemical engineers in CHE 371 or 380..
 - Some dozens in the “Senior Projects Lab”
 - I know one rather famous person — and one story

CHE 487

FLUID DYNAMICS

ChE 487

Spring 1988

Prof. T. J. Hanratty

1 unit

- I. Introductory Remarks
 - A. Application of Thermodynamics to Fluid Dynamics Problems
 - B. Application of Newton's Second Law to a Flow Field
 - 1. Momentum Theorem
 - 2. Energy Theorem
- II. Review of Uni-Directional Flow Problems and Newton's Law of Viscosity
 - A. Pipe Flow
 - 1. Convention of Shear Stress
 - B. Couette Flow Between Rotating Cylinders - Viscometric Equations
 - C. Kinetic Theory Interpretation (Momentum Flux vs Shear Stress)
- III. Development of the Equations for a 3-D Flow Field
 - A. Continuity Equations
 - B. Momentum Theorem Applied
 - 1. Body Forces
 - 2. Surface Forces
 - C. Properties of the Stress Tensor, τ
 - D. Velocity Gradient Tensor, $\epsilon_{ij} + \Omega_{ij}$
 - E. Generalized Constitutive Relations
 - 1. Generalization of Newton's Law of Viscosity (for a Newtonian Fluid)
 - 2. Navier-Stokes Equations
- IV. Status of Non-Newtonian Fluid Mechanics
 - A. Non-Linear Effects
 - B. Normal Stress Effects
 - C. Viscoelastic (Time) Effects
 - D. Maxwell's Linear Viscoelastic Model
 - E. Reiner-Revin Model
 - F. Oldroyd's Convective Derivative
- V. Discussion of the Navier-Stokes Equation
- VI. Creeping Flow
 - A. Flow Around a Solid Sphere (Stokes' Problem)
 - B. Whitehead's Paradox (Regular Perturbation Technique)
 - C. Stokes' Paradox (Flow Around a Cylinder)
 - D. Recent Developments
 - 1. Oseens' Approximation (Cylinder and Sphere)
 - 2. Singular Perturbation Techniques

VII. Ideal Flow Theory - Euler Equation of Motion

- A. Assumption of Irrotationality
- B. Bernoulli Equation
- C. Incompressible Potential Flow Problems
 - 1. Flow Around a Sphere
 - 2. Wave Motion
- D. Two-Dimensional, Inviscid Flow (Complex Variables)
 - 1. Flow Around a Cylinder
 - 2. 2-D Vortex
 - 3. Flow around a Cylinder with Circulation
 - 4. Conformed Mapping
 - a. Flow Around a Cylinder
 - b. Flow Around a Flat Plate
 - c. Free-Streamline Problems
 - d. Schwarz-Christoffel Transformation - Flow Through 2-D Orifice

VIII. Boundary Layer Theory

- A. Physical Assumptions
- B. Equations of the Boundary (2-D)
- C. Typical Problem Definitions for BLT
- D. Remarks on Separation
- E. Examples of BLT
 - 1. Flow Over a Flat Plate
 - 2. Stagnation Flow
 - 3. Remarks on Similarity Solutions
 - 4. Blasius' Series Solution
 - a. Gortler's Expansion
 - 5. Integral Methods (Approximate Methods)
 - a. Flow Over a Flat Plate
 - b. Pohlhausen Method
 - c. Bohlen-Walz Improvement
- F. Numerical Solutions of the Boundary Layer Equations

IX. Turbulence

- A. Reynolds Stresses
- B. Empirical Approaches (Mixing Length Theories)
- C. Dimensional Analysis Approach: law of the wall, defect law, overlap law
- D. Equation for Turbulent Energy
- E. Modern Methods for Predicting Reynolds Stresses
 - 1. Zero Equation Models
 - 2. One Equation Models
 - 3. Two Equation Models
 - 4. Direct Solution of the Equation for Reynolds Stress

X. Numerical Methods

 - M. R. King
 - M. J. Mitchell

FOR ALL OF US

- We can all make a difference personally...
- If Newton had never lived, nothing in the world would be different*, may also be true about Einstein but...

* This same statement is not true in the creative arts. If Mozart had never lived, we would not have Don Giovanni and if Dickens had never lived... what we would watch at Christmas?
